

Zac Baker

Module 11.2 Assignment

5/22/2026

Topic

The topic was to create a table for a database called "baseball_01", so I thought of having a database about baseball players and data relating to them. I set the player_id to auto-increment, so user input does not dictate this. The first and last name, as well as the team, are all string inputs by the user, indicating which player and the team they belong to. The player's age is an integer value, while the player's height is a float value. Finally, the active status of the player is a Boolean value that shows whether or not the player in question is actively still playing or if they have retired.

player_id	player_firstName	player_lastName	player_team	player_age	player_height	player_active
1	Zac	Baker	LA Dodger	29	6.2	Yes
2	John	Arzel	LA Angels	34	6.5	Yes
3	Jim	Wright	Cardinals	33	6.3	Yes
4	Tim	Tebow	Mets	45	6.4	No
